incadea presents a modern approach to technology, empowering OEMs, importers and dealerships to accelerate business productivity and user experience.

Let's build great customer experiences together.

About autoscan

The **autoscan** Mobile Warehouse Management app is the perfect add-on solution for warehouses using incadea DMS worldwide with their officially supported scanner which integrates and simplifies tasks for parts staff in workshops, warehouses, and tire hotels by advancing operational efficiency. **autoscan** is the ultimate workplace tool designed specifically for parts handling in various environments.

This app allows you to perform various tasks efficiently by scanning a barcode or QR code. It is compatible with modern devices and can automate multiple steps in your parts management process chain, from incoming parts to picking, physical inventory counting, and much more. Using **autoscan**, dealers can eliminate errors and achieve a more efficient and streamlined workflow.

Boost warehouse efficiency with **incadea.dms** and **autoscan** features:

Incoming goods handling > Scan the shipment's barcode to start the incoming goods check for any of the following: cockpit parts purchase receipts, import costing documents, branch orders or sales orders.

Stocking > **autoscan** safely guides you to put away received items and checks for errors.

Sales & Service Order Handling > **autoscan** displays all sales and service order positions with quantities and shelf info and it grabs and scans items for automatic picking and shipping. Alternatively, scan the order and item codes to add them to service orders. Adjust the quantity if needed and select the service job. You can also increase the quantity of existing items and more.

Automatic posting, invoicing, and printing > **autoscan** records delivered quantities and can activate automatic invoice creation and printing, saving time.

Picking > **autoscan** enables wholesale fulfillment. Open all pickable positions for service or sales orders, pick into temporary boxes, and flag incomplete positions.

Physical inventory› The era of paper-based acquisition lists and error-prone data entry is over. **autoscan** guides you through the acquisition list shelf by shelf, always showing you where you are and where to go next.

Items and locations› **autoscan** allows you to scan an item to open its information, displaying details like available quantity, shelf (bin), and reservation status. You can also print labels, remove shelf (bin) assignments, and add items to requisition worksheets.

Item transfer› To move an item to a different shelf (bin), scan the item and new shelf (bin) codes. Move all or only stock items and set the new shelf (bin) if needed.

Location information› Scan the shelf (bin) to see all the items assigned to it and their expected quantities. Optionally, you can remove an item's shelf assignment or print shelf labels with a mobile printer.

Tire hotel› Record tire data in Tire Hotel Orders including thread depths, damages, and photos. Put tires into storage and keep your tire warehouse in perfect order. Pick tires for the next service appointments you scheduled with the Web Service Planner.

Take the next Step.
